

DRAFT Documentation of Activities

Delivery Order W912HZ20F0209/Contract W912HZ-20-D-0004

Conduct FRESCO Framework & Model Debugging, Perform Model Evaluations and Validation

7/1/2021

Introduction

The U.S. Army has a continuing need to understand human and environmental health risks associated with military-relevant compounds (MRCs) and with movement off-site of range munition constituents (MCs). The U.S. Army Engineer Research and Development Center is now developing a renewed product — the Fate and Risk Evaluation System for Contaminants (FRESCO™) — that builds on and updates the Training Range Environmental Evaluation and Characterization System (TREECS™, 2008-present) and the earlier Adaptive Risk Assessment Modeling System (ARAMS™, 2000-2007) to address the Army's needs and further support the Operational Range Assessment Program.

Understanding Risks

FRESCO™ extends ARAMS™ and TREECS™ capabilities for modeling fate and transport of MRCs and MCs to establish media concentrations for comparison to risk-based screening levels (Level 1 risk assessment). The extended capabilities are being implemented in concert with modernization of the supporting data, the codebase – including the underlying Framework for Risk Analysis in Multimedia Environmental Systems (FRAMES) modeling framework developed at the Department of Energy's Pacific Northwest National Laboratory (PNNL) – and documentation to deliver a sustainable and reliable platform for MC/MRC risk assessment for the long term.

Current Work

Under delivery order W912HZ20F0209 (*Conduct FRESCO Framework & Model Debugging, Perform Model Evaluations and Validation*) for contract W912HZ-20-D-0004, LimnoTech is responsible for four tasks:

1. Conduct FRESCO™ Framework, Models, and Components Debugging.
2. Conduct FRESCO™ Framework, Models and Components Testing and Evaluation.
3. Conduct FRESCO™ Framework, Models, and Components Validation using Existing Army Datasets.
4. Development of a Final Report documenting FRESCO™ Framework, Models, and Components.

Deliverables for this order include updated code as well as documentation of the process and outcomes for debugging, evaluating, and validating that code. This report, which provides the required documentation, is organized into the following sections:

- Overview of code development and management.
- Components and organization
- Task 1 – Debugging
- Task 2 – Test and evaluate
- Task 3 – Validate
- Summary and next steps

Overview of Code Development and Management

The FRESCO development process is built around the GitHub development platform (<https://github.com/about>). GitHub repositories are used to store and version-track the source code and other components of the FRESCO system, and to organize debugging and development activity. Because of the complexity of FRESCO and its components, the source code, help contents, and other files are distributed across the following individual repositories:

Description	URL
UIs	
FRESCO GUI	https://github.com/LimnoTech/FRESCO
HGCT and Tier II Soil Model GUIs; helpers	https://github.com/u4epwjg9/Fresco_TTSM_HGCT
Tier II Soil Model GUI for Arctic Cases (combined with HGCT GUI and helpers)	https://github.com/u4epwjg9/FRESCO-TTSM-Arctic
Modernized FRAMES Uis	https://github.com/LimnoTech/RepSS.NET
Support Tools	
Arctic Inputs Helper	https://github.com/u4epwjg9/ArcticSoilModelGuiHelper
Multiple AOI Tool	https://github.com/u4epwjg9/FrescoMATv2
Package/Unpackage Tool	https://github.com/u4epwjg9/FrescoPackageUnpackageTool
Grid Table Tool for HGCT	https://github.com/u4epwjg9/FrescoGridTableTool
Tier II to Advanced Tier II Conversion Tool	https://github.com/u4epwjg9/ConvertFrescoProjectToFramesTool
BMP AOI Export Treatment Module Output Viewer	https://github.com/u4epwjg9/BmpOutViewer
Database Editors	
Benchmark Database Editor	https://github.com/u4epwjg9/FrescoHealthBenchmarkEditor
Munitions Database Editor	https://github.com/u4epwjg9/FrescoMunitionsDatabaseEditor
Reporting	
Input Summary Report	https://github.com/u4epwjg9/TreecsCRsummaryReport
Help File	
FRESCO CHM source (HelpSmith XML format)	https://github.com/LimnoTech/FRESCO-CHM

A snapshot of the contents of these repositories as of *xx/xx/2021* is available at *URL*. The snapshot is a ZIP archive file containing individual ZIP archive files for each repository.

Include issues in snapshot

The main repository for FRESCO is at <https://github.com/LimnoTech/FRESCO>, and includes GitHub Milestones, Projects, and Issues used to manage the development process.

The development technology stack is informed by the targeted delivery of FRESCO as a desktop program executable on a Microsoft Windows 10 workstation. The FRESCO user interface is primarily implemented in Microsoft C#.NET (UI), but version 1.0 still includes some legacy components written in Microsoft Visual Basic 6 and in Microsoft or Borland C++. The primary development platform is therefore Microsoft Visual Studio 2019 (Community Edition) (**VERSION NUMBER**). Key dependencies are:

- R
- MapWindows
- Spread FarPoint
- **OTHERS?**

The various components (executables, libraries, help files, and data files) are combined into an installation package using Revenera InstallShield 2020 **Rx** Professional. The InstallShield configuration file is included as part of **FRESCO REPO? SEPARATE REPO?**.

Task 1 – Debugging

Under this task, LimnoTech performed debugging of the framework, models, and components to ensure correct operation consistent with similar operations conducted with the predecessor model TREECS. Correct operation was evaluated for a number of individual actions and for complete scenarios in a manner informed by SME Mark Dortch. When incorrect operations were identified, issues labeled as "bug" were created in GitHub and used to track mitigation and confirmation of corrections. The table below lists the debugging issues identified and corrected during the course of this delivery order.

Table: FRESCO GitHub Issues tagged as "bug" (illustrative)

Issue #	Issue Title	User Name	Labels	State	Milestone	Date Created
16	New folk add an issue	tslawecki	bug	open	FRESCO v 0.1	2020-12-23T18:01:06Z
45	Plotting hydrologic time series in Excel locks up	tslawecki	bug	open	FRESCO v 1.0	2021-01-07T18:01:45Z
47	Minor error warnings when save a .trp file in a directory with another .trp file	MarkDortch	bug	open	FRESCO v 1.0	2021-01-14T17:15:52Z
54	WFF Surface Water and Aquifer Percent Plus Operator	MarkDortch	bug	open		2021-01-30T19:38:15Z
55	Potential bug when linking MEPAS human exposure module to the TREECS source loading/Tier 2 soil model within FRAMES.	MarkDortch	bug	open		2021-02-02T00:47:59Z
56	Potential bug associated with MEPAS source in soil model UI in FRESCO/FRAMES	MarkDortch	bug	open		2021-02-02T00:53:56Z
58	Resurfacing SU issue?	tslawecki	bug	open	FRESCO v 1.0	2021-02-18T12:44:38Z
85	Vadose and Aquifer Model UI	tslawecki	bug	closed		2021-05-20T16:31:18Z
86	RECOVERY not running	tslawecki	bug	open		2021-05-20T17:14:21Z

Task 2 – Test and evaluate

Intro text recapping scope of task

==== LIST OF TESTING/EVALUATION ISSUES FROM GITHUB HERE

THESE ARE NON-BUG ISSUES

Task 3 – Validate

Intro text recapping scope of task

provide access to installers and test projects

==== LIST OF VALIDATION TESTS (TREECS PROJECTS RUN UNDER FRESCO AND COMPARED) HERE

Summary and next steps

Abbreviated recap of Tasks 1-3

Next steps - move to 1.1, hanging chads, new case study, training and workshop
